## **SAVVY PATIENT REPORT**

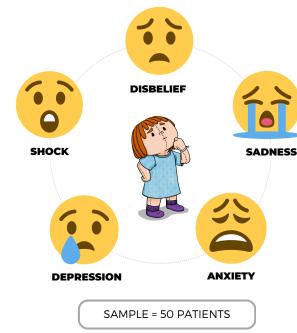

Diverse Insights on Treatment, Tech, and Access

### "Care" Means Meeting The Whole Patient Where They Are

Patients are people, people with a lot going on. Innovators often get caught up in their snazzy new solution without taking into consideration if it **really matters** to patients and their care teams. Too often, innovations are designed and developed in silos, and then don't make an impact or integrate seamlessly into patients' lives, adding to the hurdles they must navigate to maintain their health and access care.

That's not savvy! What is savvy? Asking and co-designing with patients from the start! Yep! You heard that right. Ask Patients!

And ask we did! Here's what patients had to say about the tech and innovation being discussed among our healthcare colleagues.
